## 6000-AS INSULATED VINYL SIDING

6000-AS Double 6" Clapboard  
in Platinum Gray.

Outstanding energy efficiency, superior beauty, and carefree upkeep are expertly achieved with Window World® 6000-AS Insulated Siding. This high-performance insulated wall system creates an upscale exterior for your home while protecting it with a weathertight finish that reduces energy spending year-round.<sup>1</sup>

Window World 6000-AS insulation creates a strong thermal barrier yet resists water retention that can lead to mildew or mold.

With Window World 6000-AS Insulated Vinyl Siding, the expanded polystyrene (EPS) rigid foam is laminated beneath the .046" siding panel for a formidable wall of thermal protection. This precision-engineered insulation - up to 1-1/2" thick nominally - will help keep your home warmer in the winter and refreshingly cool in the summer with less energy consumption. At the same time, the EPS layer helps prevent impact damage, reduces noise infiltration for a quieter indoor ambiance, and discourages termites from nesting behind the siding.

An exclusive interlocking tongue-and-groove panel design means Window World 6000-AS Insulated Siding stacks firmly and locks in place. Available in two timeless profiles, Double 6" Clapboard and Double 5" Dutch Lap, Window World 6000-AS embodies the beauty of traditional finely milled cedar planks. The 16'8" extended length panel is more than 38% longer than conventional 12' siding for understated elegance with fewer overlapping seams.

### Classic Style, Impeccable Craftsmanship

In Window World 6000-AS Insulated Siding, you have found a siding solution that's built to perform. With refined style and enduring protection, it delivers every "must-have" for today's homes.

**Natural Wood-Like Appearance** Ultra-premium vinyl panel with finely milled cedar texture recreates the classic elegance of freshly painted wood.

**Superior Energy Efficiency** Keeps your home warmer in the winter and cooler in the summer with less energy use.

**Never Needs Painting** Simply rinse occasionally with a garden hose to restore the like-new beauty.

**Highly Durable and Dent-Resistant** Excellent impact resistance to damage from hail and other wind-blown objects.

**Adds Curb Appeal and Resale Value** An upscale, energy-efficient home exterior is an attractive amenity.

### Reduce Thermal Bridging!

The ideal way to improve the energy efficiency of your home is to systematically seal off major areas where energy escapes. You may not realize it, but roughly 25% of a home's wall surface is composed of wood studs that typically are not insulated. The bare studs create a pathway that allows energy to leak in a process known as "thermal bridging," which compromises the energy efficiency of the entire wall. Window World 6000-AS Insulated Siding helps prevent thermal bridging by insulating over these surfaces with a powerful thermal barrier that helps prevent energy loss.

### Design Innovations for Superior Performance

- Fully integrated 1-1/2" thick EPS (expanded polystyrene) rigid foam insulation reduces energy loss and reinforces the siding for smooth walls with straight course lines.
- Secure panel locking system increases rigidity and locks the stacked panels firmly in place.
- Fully rolled over, double-thick nail hem anchors panels to the wall; meets or exceeds ASTM D5206 test standard for negative wind load resistance.
- "Breathable" insulation with a Perm Rating of 5 allows moisture to escape and not get trapped inside, which can lead to mold and mildew.
- High-density insulation softens outdoor noise for a quieter interior.
- Insulation is treated with a non-toxic mineral additive that discourages pests from nesting behind the siding; safe for humans, pets, and the environment.
- Backed by a lifetime limited transferable warranty\* - including fade and hail protection.
